OBUTUMWA BWA EDITOR

Ahari abahungu bemiti aba TIST.

Ekyanda kihwire mukore ebi:

- ↳ **Tutandiikye kubyara emititi**
- ↳ **Okutaho uburyo byokutanga omutungu nk'ebitaaba.**
- ↳ **Esente za TIST kuyamba omuhungu w'emititi kuha School Fees nokukora ebyetago byeka byoona, noku gura embibo z'emititi.**

English Version

KANUNGU REQUANTIFICATION EXERCISE.

It is good news to inform SG members every where that Kanungu quantification suspended two years back has resumed at the beginning of August 2009. My appeal to Kanungu SGs is:

Move forward with courage, never fall back. Backsliding is an enemy of development.

BUSH BURNING IS BAD IN TIST

When the bush is burnt, the run off water from tops of hills and mountains causes soil loss by soil erosion. We have to control the fire in our farming systems such that our beautiful land remains good.

Millet growing preparation has caused soil loss and especially farmers whose gardens are in valleys and hill sides.

We should not rely on traditional ways of land preparations. When we change the systems, we shall be assisted because population increase in Bushenyi, Kabale and Kanungu is very high.

Farming trends and changes will bring good yields when we follow our agricultural officers, forest officers, religious leaders and Government policies. Before we are aided for food scarcity let us combine efforts to stop bush burning, this will give us good results in future for our beautiful land to remain fertile.

Advocacy from Rev. Enoch Tumwebaze.

REARING ANIMALS IS GOOD IN TIST PROGRAMS.

God created the earth, put in plants and animals and this was so good. He created man at last and made him the heir of the earth. Man must mind the projects of looking after all and animals tamed and wild inclusive.

When animals are reared they will in turn give the plants manure which enriches the land and the crop yields to remain constant. We encourage our farmers to plant more trees using biodiversity (to plant trees of different types for balancing echo system) Also animals, cows, goats, sheep without forgetting our birds (poultry) is very important.

Animals do not only give manure to farmers but give them income as well when they are sold. Family needs are catered for. It would be good for our TIST members to rear few animals on your farms so that your families get wealth which will help you in your daily life.

However, animals should be controlled so that trees are not disturbed for those who are interested in rearing of Goats, cows and minding the birds. Man being steward has a big role to play.

By Rev Enoch.

TIST IS GOOD

Ever since I joined TIST, I have never regretted because I have learnt many things like planting fruit trees and appropriate budget in project planning for my family.

So far I am focusing to plant 100 orange trees for the future income because of my family.

You may give your child school fees when you have fruit trees such as Ovaccado, mangoes, oranges and Guava. When you sell them you get money and fruits trees give good clean air.

KYONYO KAMUGANGUZI

We as the group of Ababariisa which is found in Kamuganguzi are very happy for TIST Uganda. You know? You trained us to be reliant as we prepare little land for crops but the yields being plenty! Nursery bed establishment and management for trees of ones choice is very important. Since the trees are the ones that fight bad air. You educated us to work together to fight hunger and this is important because it shows good results. Let cooperation in TIST stay for ever.
Ndyabaawe C.Peters.

KIKOMBE EDUCATIONAL FUND SG AND TIST

Kikombe educational fund SG is one of the very first groups to join TIST program in 2003 and it is found in the centre of Burere, Bushenyi District. A conversation with one of the group members revealed that they were impressed after attending a sensitization session on hearing that there was to be an organized way of having the local people participate in protecting the environment so they decided to form a group

and join the program. A further talk revealed that through a series of training they have learnt a lot such as spacing, thinning and pruning.

The members visited said that the incentives received from TIST will be utilized in expanding and cleaning up their tree groves. As a matter of fact the group has already invested their savings to set up a nursery bed of gravellier and pinus species where they work every Thursday on a voluntary basis as one of the values of TIST. As I write this article, I would wish to call upon small groups to follow the example of Kikombe educational fund SG and set up their own small nurseries so as to reduce the expenditure of buying seedlings from commercial nursery bed operators.

Let's unite and plant more trees, clean up the environment for the better future of mankind & his surroundings.

AGABA DENIS QUANTIFIER – BUSHENYI

TRAINING AND EDUCATING AN OLD MAN

Training an adult is not a simple thing but it is

not too late for anybody to learn a new thing! The wind of change transforms somebody from bad state to a good one.

Educating somebody, you your self being a role model is very important. How can I train someone who is advanced in age than lam?

How can I listen to some one who is younger than my age?

Building up of one another is good. We train, we educate, we research and the truth is an adult is a tool to protect the young ones for the future. Be a role model in training, respect yourself, respect other people, guide your self to the proper channel and guide others. Education is a key that opens the brains of the people to development.

Keeping the merits of an individual tomorrow to be a tool to talented, will give the community a way forward.

Come and join TIST trainings, build one another with tender hands we shall protect the character of young man.

**God will reward you.

Tumwebaze.**

TIST PEOM

Come together to form a group, come closer in clusters!

Come together to form a group come closer in clusters!

We are to plant trees the desert will go away.

I know no one to blame its natural hazard!

I know no one to blame its natural hazard!

However, the impact is caused by man.

Man in revolution, man in historical data!

Man creating ventures man tries to invent!
The earth cover was removed away.

Have resolutions have targets to retain the nature
Have trees have meetings plan the natural shape
will come

The breezing of cool wind the coldness of the body
Rains have come

All were done by man!

The hands which destroy are the hands that heal
Come together come closer in clusters

We are to plant trees.

By Rev.Enoch Tumwebaze.
